ETIS ENGINEERING TRUSTWORTHY INTELLIGENT SYSTEMS

ENGINEERING STUDIO

START HERE | COMP 330 | v0.18.2

START HERE

A five-minute path. No special vocabulary required.

Use Studio while your team's work is still in progress. It is a coach—not a grade or instructor approval.

Two rooms. One simple workflow.

REVIEW ROOM · DISCUSS	**Ask questions, respond to the Review Board, and work through decisions.**
EVIDENCE ROOM · INSPECT	See the saved repository files and concerns behind the review.

Your first five moves

1. Sign in. In My Team, check your team, link your own GitHub identity, and confirm the team repository says Verified.
2. Commit and push work to your team's GitHub repository. Studio cannot inspect files still only on your computer.
3. In Engineering Review Room, check your phase and click the teal Start Board Review. For a specific question, use Other review options → Focused Review.
4. Talk naturally. Type an answer, ask for an example, or disagree. Use Evidence Room to inspect a saved file, then return to the conversation.
5. Improve your repository work and push it. Click Start another Board Review to begin directly. Earlier reviews remain available.

What the three review states mean

OPEN	**Keep talking later. The conversation keeps its original saved evidence.**
FINISHED	Read-only, but still in Review History. Not instructor approval.
CURRENTLY VIEWING	The one conversation on screen; you may have other Open reviews.

Remember: a new conversation does not necessarily mean new evidence. If the phase and commit did not change, Studio may reuse the saved snapshot.

Stuck? Click Help for navigation, or ask the Review Board "Can you explain this more simply?"
