STUDENT CHEAT SHEET

What to click, what to say, and what to do next.

The normal path

1. Push a draft to your verified team GitHub repository.
2. Review Room → choose phase → Start Board Review (teal button).
3. Answer naturally. Ask questions, disagree, or ask for an example.
4. Need proof? Evidence Room → inspect a file or finding → return to your review.
5. Change and verify your work in GitHub → push → Start another Board Review.

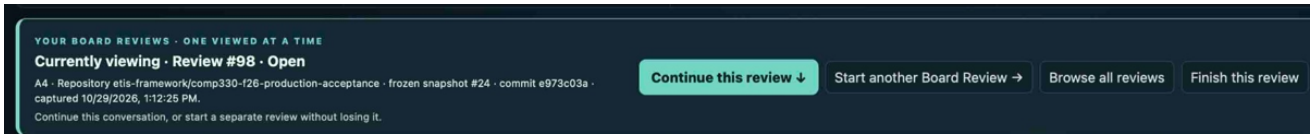

Which button?

Start Board Review	**Let the Review Board choose an important question for this phase.**
Other review options → Focused Review	Ask about a particular estimate, risk, document, design decision, or PR.
Other review options → Review Findings	Discuss one to three existing concerns.
Continue this review / Go to your reply	Return to your active conversation.
Start another Board Review	Begin a separate review directly. It does not finish earlier Open reviews.
Browse all reviews / Review History	Resume an Open review or read a Finished one.

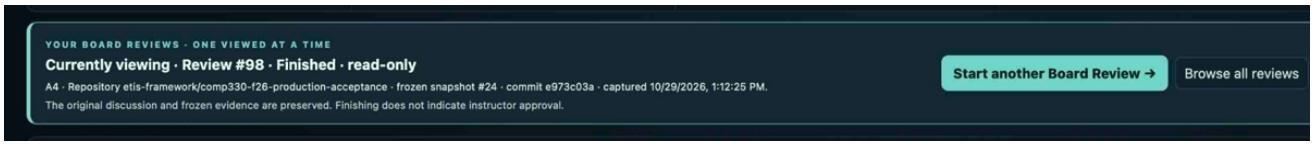

What can I say to the reviewer?

- “I’m not sure. What should I check first?”
- “Can you explain that with a simple example?”
- “I think you missed this file. Can we inspect it?”
- “Before I answer that, can we discuss our estimates?”

Two rooms, one workflow

An Open review: Continue this review is the main action. Other reviews remain available.

A Finished review: Start another Board Review begins a new review with one click.

Talk, inspect, and come back

- Review Room is the discussion. Evidence Room is the saved source notebook. Switching rooms does not finish a review.
- Standard is the normal conversation layout. Expanded gives your conversation more room.
- Inspect cited source opens the file attached to a concern. Find supporting evidence looks for relevant or equivalent files in the same saved snapshot.
- A review's original snapshot never absorbs later GitHub commits. Check the commit when comparing old and new work.

When something seems wrong

The Board missed a file	**Check the file is committed and pushed; inspect the saved snapshot; give its path and explain what it proves.**
I changed the repo, but old review is unchanged	Expected. It is frozen. Start another Board Review for the newer available revision.
I cannot reply to a review	Finished reviews are read-only. Open an existing Open review or start another.
A button or response failed	Check review history and the current conversation before retrying; do not repeatedly click.
I do not know how to begin	Use the teal Start Board Review. You do not need a polished question or finished work.
My GitHub repository is already Verified	Do not repeat team setup. Confirm your own GitHub identity is linked in My Team.

Keep these three distinctions clear

- A REVIEW finding is a challengeable interpretation; a frozen FACT is repository evidence at a checkpoint.
- Finishing a review does not mean the instructor approved your work. Studio is developmental coaching.
- A new review is a new conversation, not necessarily a new repository snapshot.
